

Herbert Hoijtink <https://www.uu.nl/staff/hhoijtink> is professor in Applied Bayesian Statistics at Utrecht University. He teaches Bayesian statistics and open science to bachelor, master and PhD students, and post-doctoral academics. In line with the former his main research interests are Bayesian hypothesis evaluation and open science. A relatively new interest is SOTL, that is, Scholarship of Teaching and Learning, that is, researching academic education with the goal to improve it. Finally, he is irrationally fond of cats.
